## The Euro Diabetes Index is...

A tool for awareness and advocacy at national and European level to empower patients and physicians member states plus Norway and Switzerland Help Increase public European awareness, create Increase citizens transparency to indicate strong improve and weak aspects comparability the of each national of health care health care services

system

## **Key findings of the Euro Diabetes Index 2014**

they receive

#### Prevention

systems

Public health programmes have not reached their goals to modify risk factors for diabetes

#### Case finding

- □ National Diabetes Registry is limited and restricted
- Diabetes screening is random and unsystematic
- Gestational diabetes screening of women is non-standardised and inconsistent

### Range and reach of services

- ☐ Special footwear is restricted to one pair per year for both adults and children
- Podiatric care is a private expense in some countries
- ☐ Eye care is available in most countries
- ☐ Medication non-adherence is high

#### Access to treatment or care

- ☐ Insulin pump therapies are limited
- Continuous glucose monitoring use is restricted
- ☐ Glucose test strips are insufficient for patients
- Patient education programmes are of varying quality and lack continuity
- ☐ General physicians have not received training on recommended standards of diabetes care

#### Procedures

☐ Data is lacking in many countries on monitoring plans and annual checks for diabetes and comorbidities

#### Outcomes

☐ Many countries have unreliable or no information available on the outcomes of their diabetes treatment and plan
